- www.malagablues.com (Joomla portal of Málaga Blues Society)

2005 – Until 2010. *Autonomous Worker* Málaga

- Analysis, programming of open source applications, network administration, and technical service.

2010 – **ADH** (Application of Water Demands (Junta Andalucía Government) - Intranet)

Last project carried out for the Junta de Andalucía and internally for the Andalusian Mediterranean Water Basin through the advisory company Infraeco s.l. The application allows for studies of consumption, demand, water needs, counting, precipitation, evapotranspiration, etc. About susceptible subjects of such studies as population, different industries, infrastructures, etc. and its categories. The studies are shown in different types of mathematical graphs and tables, and can be registered by different types of users. With a history of field work carried out by different entities and companies from 1990 onwards, and with two years horizons to store predictions, 2015 and 2025. The analysis, standardization of bd in postgres, code implementation, debugging, optimization and extensions Later, more documentation of all the facets for the correct use of the application, has been carried out entirely by me in just over a year. More than 20,000 lines of code: php, sql on postgres, xml, javascript, html.

Daniel Calvo Caballero

- 2009 – www.gliptica.com (PYME, Joomla Ecommerce)
2009 – www.fusionart.es (PYME, out of service. Website of marketing and creatives LTD)
2009 – www.mariocanivell.com (PYME, out of service)
2009 – www.damasoruano.com (Virtual galery)
2008 – www.pepacaballero.com (Virtual galery)
2008 – www.toyotarent.by (PYME Bielorrussian website of Toyotarent)

2007 – www.lovinconnection.com (Social network, full stack, out of service)

Project carried out for a marriage agency, which gives rise to a web of contacts, or social network, in the line of Badoo, through membressia. Developed from scratch, and with more than 50,000 lines of php code, with mysql database, supported with javascript, and flash for the header, always present, and taking advantage of the tightness of this file as a security layer to enter access data to the application. With a few minimum permits under free registration, the network obtains benefits through membership, to access the contact details of the other person. This membership is established through the transactional data provided by a Cashier, a bank, such as TPVV, and with the following essential services for this use: Repetition of payments parameter; Digital signature for test environment, and another for the real one; Own technical service; Own and customizable bank data entry form. Currently in update to republish under a new, more optimized version, to be at the height of other social networks. With some changes on the benefits method, such as relegating the membership service to obtain those added values on basic services, or through advertising. Currently not published by server change and modular expansion.

2001 C.S.I. Servicios Informática, s.l. Málaga

- Web Developer and Designer, internship
